Scott:

On Thursday I will be meeting with Katy Coba and Lisa Hanson. Can you fill me in on any details I should know about the email below? My meeting starts in the early afternoon tomorrow so I would need something in the morning Thursday on this. Thanks!

Dennis McLerran

Subject: Fwd: PARC Exposure Investigation; request for release of application records

---

Dennis,

Katy and I would like to discuss this email with you tomorrow at the Ag Forum in Boise. Look forward to seeing you there.

Lisa Hanson

Oregon Department of Agriculture

**Subject:** **PARC Exposure Investigation; request for release of application records**

Dear Ms. Coba and Mr. Decker,

I am assisting in the drafting of a response to comments on a "Petition from Pesticide Poisoning Victims United, a Division of the Pitchfork Rebellion," submitted to the Environmental Protection Agency in 2010 and posted to the electronic docket OPP-2010-0265 at <http://www.regulations.gov/#!home> . The petition asked the Agency, among other things, to conduct a study to determine an aerial pesticide application buffer that would be protective of the health of the petitioners, primarily residents of the Triangle Lake area of Lane

County, OR, and to establish an interim buffer of one mile around homes and schools in the area. Because I have been managing the petition response, I am very interested in the developments in Lane County.

As you are aware, Oregon's Pesticide Analytical Response Center (PARC), in partnership with the EPA and the Agency for Toxic Substances and Disease Registry (ATSDR) has been conducting an official exposure investigation to help determine whether a group of Lane County residents associated with the Pitchfork Rebellion have been exposed to pesticides applied in the areas around their homes. I have been participating in discussions, chaired by Jae Douglas of the Oregon Health Authority, on the question of how to determine what pesticides have been used in the area. In those meetings, there has been considerable focus on the release of application records that must be kept of all pesticide applications in the State of Oregon. It is my understanding that the application records relevant to the investigation can be made available to the PARC researchers via a request from OHA, and that such a request was made to ODA and ODF on October 13, 2011, for application records from the years 2009, 2010, and 2011.

The OHA has clearly stated that past application records are essential to "understand and ascertain how pesticides are applied in the area under investigation" and that the records from the spring of 2010 may help corroborate or refute allegations made by members of the Pitchfork Rebellion at the ODF board meeting in April 2010. Since the records request has been made as part of an official PARC investigation, and because the records are an essential part of that investigation, I am concerned that PARC does not yet have the records in hand.

In addition, as part of the ongoing exposure investigation, EPA is developing an air sampling plan to be implemented during the spring 2012 spray season. A review of the actual application records will help EPA refine the target analyte list and thus reduce the overall costs of the investigation. EPA's Office of Pesticide Programs (OPP) also is interested in a comparison of the application records relative to any evidence of incidental exposures to help determine whether labeling requirements are protective in conditions like those encountered in the Triangle Lake area. This comparison is relevant to our re-evaluations of pesticides currently in the registration review process, and also to others scheduled to enter that process in the near future..

I appreciate any insights you can offer or help you can provide in the release of the application records requested by OHA. If you would like to discuss my Office's interest in the records, please let me know a range of times when you would be free to talk, and I will be happy to

set up a conference call. Thanks again.
